

Dear members of EBSA

First of all I want to express thanks to EBSA for the bursary that gives me the opportunity to attend at the 12th EBSA, 10th ICBP-IUPAP Biophysics congress this summer in Madrid.

The congress, in my opinion, was very well organized, with great catering service and support staff. In addition, the Aquina's student accommodation was very comfortable and staff was very kind. During my poster's session, I received some interesting and kindly comments and ideas from different points of view that I probably will apply in my research

About the scientific content of the congress was also amazing. I really enjoy the plenary conferences of the two Nobel price winners Sir Gregory Paul Winter and Dr. Stefan Hell. I also enjoy Jennifer Lippincott-Schwartz plenary lecture and the great cell organelles reconstruction images obtained with FIB-SEM.

The parallel sessions were also very enriching for my, especially mechanobiology, trafficking and signalling, new frontiers in bioimaging and big data in biophysics, among others.

Finally, the congress dinner was also great, nice views, great gastronomy and music to close a very great experience for me.

Thank you again for this opportunity,

Best regards,

Marta Cullell Dalmau
